

Figure 10 is a line graph titled "Moments: Real vs Estimated". The y-axis is labeled "Moment [N·m]" and ranges from -1.0 to 0.0. The x-axis is labeled "Time [s]" and ranges from 0 to 45. The graph displays six data series: M_x^{real} (dark blue), M_x^{est} (light blue), M_y^{real} (dark green), M_y^{est} (light green), M_z^{real} (dark red), and M_z^{est} (orange). The estimated moments (M_x^{est} , M_y^{est} , M_z^{est}) are all zero. The real moments (M_x^{real} , M_y^{real} , M_z^{real}) show significant deviations, particularly for M_z^{real} which drops to -1.0 at 20s and -0.95 at 30s.
